Cut-offs: Pirquitas: 50 g/t silver. Resources are outside designed pit. Pitarrilla: 40 g/t silver. Breccia Ridge Zone 20g/t silver equivalent for open pit potential and 65 g/t silver equivalent for underground potential (using US\$11.00 silver, US\$1.05/lb zinc and US\$0.75/lb lead). San Luis: 6 g/t gold equivalent. Recoveries 94% gold and 90% silver. Snowfield and Brucejack: 0.35 g/t gold equivalent. Recoveries: gold 75%, silver 73%, copper 85% and molybdenum 60%. (gold equivalent =US\$800/oz gold, US\$12/oz silver, US\$2.50/lb copper and US\$10/lb molybdenum). The pit optimization utilized the following cost parameters: Mining US\$ 1.75/tonne, Processing US\$5/tonne and G&A US\$1.00/tonne along with pit slopes of 50 degrees. Cautionary note to U.S. investors concerning disclosure of contained ounces and estimates of measured, indicated and inferred mineral resources: The terms "measured mineral resource", "indicated mineral resource", and "inferred mineral resource" are Canadian geological and mining terms as defined in accordance with National Instrument 43-101, Standards of Disclosure for Mineral Projects ("NI 43-101") under the guidelines set out in the Canadian Institute of Mining, Metallurgy and Petroleum (the "CIM") Standards on Mineral Resources and Mineral Reserves, adopted by the CIM Council on December 11, 2005 as may be amended from time to time by the CIM. We advise U.S. investors that while such terms are recognized and required under Canadian regulations, the U.S. Securities and Exchange Commission (the "SEC") does not recognize them.

U.S. investors are cautioned not to assume that any part or all of the mineral deposits in the "measured mineral resource" and "indicated mineral resource" categories will ever be converted into reserves.

"Inferred mineral resources" have a great amount of uncertainty as to their existence, and great uncertainty as to their economic and legal feasibility. It cannot be assumed that all or any part of an inferred mineral resource will ever be upgraded to a higher category. Under Canadian rules estimates of inferred mineral resources may not form the basis of feasibility or other economic studies. U.S. investors are cautioned not to assume that any part of all of an inferred mineral resource exists, or is

Disclosure of contained silver expressed in ounces is in compliance with NI 43-101, but does not meet the requirements of Industry Guide 7 of the SEC, which will only accept the disclosure of tonnage and grade estimates for non-reserve mineralization.
